PROFESSIONAL SUMMARY

Full-cycle software developer who writes code and owns the pipeline. My experience spans mission-critical real-time C++ development, Kubernetes-based DevOps infrastructure, and CI/CD design — giving me an end-to-end perspective that bridges engineering and operations. AWS certified. Solve CTF challenges in my own time — reverse engineering, network recon — which keeps me close to how systems actually break. Seeking a developer role at a company that values engineers who can operate across the full stack, from code commit to production deployment.

SKILLS

- C++ and Python development
- Real-time and embedded systems design
- Scripting and automation: Bash, Python
- CI/CD design and implementation (Jenkins, GitHub Actions)
- Microservices architecture; SaaS provisioning, monitoring, and maintenance
- Monitoring: Prometheus, Grafana, Datadog
- Security tooling: Ghidra, nmap, Wireshark
- Kubernetes orchestration and Helm chart authoring
- Container orchestration and cluster management (RKE, Rancher, OCP, K3s)
- Cloud provisioning: AWS, Linode, DigitalOcean, Oracle Cloud
- Private repository management (JFrog, Harbor, Sonatype Nexus)
- Container runtimes: Docker, Podman, containerd

WORK EXPERIENCE

Software Developer Feb 2025 – Present
SkySoft Solutions, Yokneam Illit

- Designed and wrote new features for mission-critical real-time systems in C++.
- Debugged and upgraded systems built on proprietary legacy libraries, increasing the system's feature upgradability and serviceability.
- Designed support applications to implement requirements from Interface Control Documents (ICDs).
- Continued to carry DevOps responsibilities alongside the developer role — supporting the company's DevOps team and maintaining CI/CD and deployment infrastructure across company projects.

DevOps Engineer Aug 2023 – Feb 2025
Commit, Petah Tikva

- Simplified adding new microservices to the main project by designing its CI/CD pipelines and Helm charts for Kubernetes.
- Diagnosed issues quickly for development and integration teams by analyzing logs to find the root cause in either code or infrastructure configuration, often incorrect use of SaaS services.
- Helped optimize SaaS and service performance by building detailed monitoring dashboards, while deploying and managing Kubernetes microservices for SaaS customers.
- Improved handoffs to customers and development teams by writing engineering documentation for complex cloud configurations, covering automation, monitoring, and performance.
- Managed and upgraded customer systems and delivered diverse projects with ongoing post-deployment support.

Integration Specialist Nov 2021 – Feb 2023
Israel Aerospace Industries

- Configured and maintained AIX Unix servers, airborne computers, and electronics systems.

EDUCATION

Electronics Practical Engineer 2017

Air Force College, Haifa

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
